

Hive Installation Guide

Download the required files provided in the [link](#)

Step 1 - Install hive by executing the shell script provided

First provide both the shell scripts the necessary permissions

```
chmod +x *.sh
```

To install hive run the following command ,if hive is launched your installation is successful:

```
./install-hive.sh
```

If u exit the hive shell after creating database,table etc , start a new hive shell using the following command:

```
./start-hive.sh
```

Make sure your hive installation is successfull and download all the files provided in the above link before handson 2.
